## **DRUG DELIVERY A REVIEW**

### **PharmaTutor**

December 26th, 2019 - The delivery of the drug through the respiratory tract is called pulmonary drug delivery. In case of bronchodilating drugs, this is advantageous as the drug will deliver directly to the region where its action is required so that the drug effect will be faster and a low dose of drug can be administered through this delivery system and so the side effects can be decreased.
